

My heartfelt Greetings to My Dear Holy Father Pope Leo XIV

CRY for Emergency Climate Action:
Blend of the Technology of Our Father,
Religions, and Governance

This is simply **ONE voice CRYING OUT ON THE STREET** for **SINK** or **SWIM** for the creation of OUR FATHER, including the Planet our HOME and the home of all to come after we are gone.

Our Father has given us **HIS ENGINEERING**. It is HIS, and NOT mine, and I have a feeling that the Lord wants me to **get the technology done** before he calls me over.

I was born a few hours apart from Pope Francis. *And like you and Pope Francis*, I also have made the Vow of Poverty, as a member of the Societas Sanctissimi Sacramenti, and ordained as a Priest by Bishop Bienvenido Lopez, D.D. on March 9, 1968, at Sta Cruz Church in Manila.

All we need is **a team under my guidance** and **the CHURCH** will set an example for all countries around the world Plus & Minus 25 degrees (North/South) of the EQUATOR. WE CAN GET A PROTOTYPE OPERATIONAL IN ONE YEAR. I have served the Philippine Government and **revived** the **Electrical Power System of the Country** from continuously deteriorating **Blackouts**.

There is not much time waiting and allowing developed countries to continue killing the Planet. Much later, this question may become real: "Would they have continued to pursue their activities, if they knew that their generation would also become victims? **And do they realize that they, too, are victims?**" And should those who collect people's money eventually realize that they are collecting food **IN ORDER** to make people **suffer hunger and discomfort?**

Let us keep this technology out of the reach of business. This is for PEOPLE. Yes, because Our Father loves People.

*I have already filed a Patent Application as a **barrier** for business, so that COMMUNITIES will **OWN** the system after the loans with profits are paid back. Then COMMUNITIES will develop by keeping resources and revenues to circulate within the Community. AND THIS IS IN ADDITION TO THEIR CONTINUAL HELPING OF THE PLANET. The model here is the **BOT**, or Build Operate and Transfer.*

Water is **GIVEN** for **FREE**. Unlike selling as in Simony, or in trading water as commodity, people will LIVE with God's LOVE in this simple little way.

WE WILL NOT TALK WITH ANYONE WHO WANTS TO BUILD A BUSINESS OUT OF THE ENGINEERING OF OUR FATHER.

We know how. We have almost all of the details, including the **BLENDING** of actions of "religions" as Pope Francis says, and of governance. This **BLENDING** is the Filipino model of the **BAYANIHAN**. When there is need, cooperation and helping accomplish a task are reflected in the Filipino Bayanihan.

Isn't this **Our Father's way of blurring the boundaries** of religion and the approaches to Pagans, tribes? And, maybe **BRIDGES**, too! We have all been "**created in the image and likeness of God**" (Genesis 1:26-27) and **we all live and share the same HOME.**

I am closing by repeating the solid fact that this is a **CRY IN THE WILDERNESS**, and resembles that cry on the street of Rome (<https://www.youtube.com/watch?v=idol6i148g0>). This crying started (about **15 years ago**), but people including holders of PhD have been **AFRAID to look it in the eye because it does not exist anywhere in the world, or think that I am doing it for myself.** And I do **not** have money to make it exist. The cost of a house in Vancouver or in Makati will be enough for a first system that will ***partially exist in 6 months, and fully exist in one year.***

I am NOT AFRAID to ask you, my dear Holy Father, to INVITE me so I can DELIVER Our Father's Engineering to you before I go. I am 88. THIS IS FOR CLIMATE CHANGE and for PEOPLE, not for money!

*We should be able to cover, maybe almost all, your questions while I am there **ALONE**, from Planning, People and Religious Values, Engineering, Economics, Hardware/Software, all the way down to the machine language programming of the Microprocessor control system.*

AND THE PLANET, TOO! On the production of our four major output products, including water, we release a **MAXIMUM** of 188 grams of CO2 per kilowatt-hour of **WORK** (Heat Pumps are included).

*This system will reduce the damaging effects of Greenhouse Methane Gas by **REPLACING** the use of Fossil Fuel with it, and the fluorine-based refrigerants (**BANNED** by the Montreal Protocol) that have already bored holes in the Ozone Layer, and the system will use only refrigerants that are **Environment-Friendly.***

The United States of America releases 1,118 grams of CO₂ per kWh of work on average (EIA report). To produce the same output products, what do you get by adding all pollutants released by their processes? Furthermore, expect increased CO₂/kWh of work more than 1,118 as loads are varied downward.

The technology of Our Father will stay on the safe side of PROTECTION. This is the former Fr Tristan Calasanz, SSS.

Tristan Hontiveros Calasanz
Poblacion, Sapi-an, Capiz, Philippines
